Spill Hound-Acid

Spill Hound-Acid has been developed and formulated for maximum safety and ultimate performance when dealing with hazardous acid spills. It has been proven to successfully neutralise concentrated acids. Spill Hound-Acid is a must for any emergency acid spill solution.

Spill Hound-Acid Applications

- Removal of spilt battery acid from workshop floors.
- Containment and neutralisation from RTI's.
- Controlling production spills from pickling processes.

Spill Hound-Acid Users

- Fire and Emergency Services
- Tanneries
- Local Authorities
- Acid transporters
- Battery Manufacturers
- Pickling plants
- Highway Maintenance

Versatile

Can be used on all forms of acid spills, including phosphoric, hydrochloric and sulphuric.

Environment

Environmentally responsible formula helps meet government guidelines (BEPO), and once fully encapsulated the used product can then be verified for potentially non-hazardous waste once this has been confirmed with your licensed waste contractor.

Effective

Spill Hound-Acid arrests the acid spill quickly and locks in any potential harmful vapour.

Ease of Use

Simply spread liberally over the spill and allow the acid to be neutralised (this will visually be seen as a mild fizzing action) once this action has ceased it will be safe to move the contents to a suitable waste receptacle.
