

## Bio-Block

### The biological block that maintains urinals

Bio-Block has been developed to eliminate the unpleasant odours associated with urinals. The biological formulation of Bio-Block gets to work immediately on the cause of the problems that create scale encrustations in traps and pipes which can then become slow running. Each block releases a powerful scale control system which helps prevent calcium carbonate build up. The blend of cleaning agents within Bio-Block enhances its performance to ensure your washroom areas are kept clean and fresh-smelling.

### Application and Directions:

Bio - Block can be used in stainless steel, Porcelain and ceramic urinals. Simply place a block into each urinal or one every 4 inches in the trough and replace when the Bio-Block reaches approximately a tenth of its size.
