Spack

The High Performance Aqueous Anti-Spatter

Spack is a new formulation in response to the growing need to replace aerosols and formulas that contained hazardous chlorinated solvents, which in turn created potential health risks when using them.

Spack combines a ready to use formula which is 100% solvent free and non-flammable, giving the user a safe way to prevent weld spatter adhesion, without the production of hazardous fumes.

Spack users

- Fabricators
- Maintenance and fitters
- Workshops
- Boat builders
- Car manufacturers
- Road tanker builders

Economical

Only require a light spray application, which stays on the surface longer.

Non-Flammable

Ensures safety when in use and in storage.

Solvent free

Safer to use than many other products, and produces no hazardous fumes when welded through.

Biodegradable

Reduces environmental hazards.

Ready to use

No time wasted diluting or measuring out concentrates.

Specialised Formula

Spack creates no fish eyes where painting is part of a finishing process. Also gives true performance when welding in corners.
